

How can the Electro-Federation Logistics program save you money?

Whether you are a large company or a small business one of the most often overlooked expenses can be freight costs. Anything from supplies, equipment, machinery, goods and anything else you can think of need to be moved and the major objective for any business is to save money on shipping!

Try the EFC Logistics Program and Save!

It is a great way to lower transportation costs especially if your business doesn't have a shipping specialist in house. Raedan Freight Services save you money by analyzing each shipment and determining which mode of transportation and carrier that will work best in each situation.

The EFC Logistics program can benefit businesses of any size or volume of shipments because of the way they strategically place each shipment.

One of the ways the EFC logistics program provides value to the members is because they have the ability to leverage multiple freight carriers. Because Raedan Freight Services work with multiple carriers, they can arrange to work with several to provide the most cost-efficient transportation costs. Raedan Freight Services have a strong handle on the freight industry, they know how to provide the best optimization of a customer's freight, and this ensures that the flow of freight transportation stays timely and efficient.

Members have saved anyway from 8% to 32% on freight costs.

Contact Raedan Freight Services for a "no obligation" consultation!
